

C11 WATER SEAL

PROTECTS MASONRY, RENDER & CONCRETE FROM RAIN DAMAGE

- Transparent **water repellent** sealer
- Works on **damp** or **dry** surfaces
- **Reduces efflorescence**

BREATHABLE, INVISIBLE BARRIER

DEEP PENETRATION, LONG-LASTING PROTECTION

DIRECTIONS:

1.

APPLICATION: Ensure surfaces are thoroughly **cleaned**.

Water Seal can be applied to **dry or damp** surfaces (not wet). **Avoid applying during wet weather** or when rain is forecast within 12 hours.

2.

METHOD: Using a pressure sprayer, brush, or roller, saturate the surface, **working from the bottom up** on vertical surfaces.

If using a sprayer, follow up with a **roller** or **brush** for **even coverage**.

3.

SECOND COAT: Apply a second coat within **1 hour** of the first, once it has absorbed into the surface but before it has fully cured.

Clean tools immediately after use with **warm water**.

Note: Test in a small, inconspicuous area to check for potential darkening of the substrate.

IDEAL USE CASES:

- **Exterior walls:** Apply to brickwork, concrete, or natural stone walls to protect against rain penetration and prolong their life, particularly in harsh weather.
- **Pebbledash and rendered surfaces:** Prevent moisture ingress that could lead to cracking or spalling.
- **Efflorescence-prone areas:** Ideal for areas where white salt deposits are a concern, as it helps prevent water from penetrating the surface and reduces efflorescence occurrence.

BEST PRACTICE:

- When **storing the product**, protect from frost and don't apply in temperatures **below 10°C**.
- **Do not use on walls with rising damp issues.** This product will not address the underlying issue and could trap moisture inside. Use a specialised damp-proofing solution instead.
- **Not recommended** for use on **retaining walls due to high moisture levels.** A liquid membrane or tanking slurry designed for retaining walls would be more suitable.

SIZE	PRODUCT CODE	PRODUCT NAME	CASE QTY	PALLET QTY	BARCODE NO.
