

COMPOSITE DECKING ALGAE REMOVER & INHIBITOR

SUITABLE FOR ALL TYPES OF
COMPOSITE DECKING & CLADDING

Advanced formulation specially developed for the removal of algae, moulds, lichen and green films from composite decking and cladding. Acts fast and effectively with no need for scrubbing, protecting surfaces from corrosion and damage.

- Removes algae & green films
- Leaves a protective barrier
- cleans & treats surfaces

DIRECTIONS FOR USE:

For best results remove any excess soiling with a brush or pressure washer, then allow surface to fully dry before applying Composite Decking Algae Remover & Inhibitor. Ready to use, do not dilute. Apply to surfaces with bucket and brush, low pressure sprayer or watering can, applying at least 200ml of product per square metre. Working Time: Leave to work for at least 36 hours, during which time green algae will be completely eradicated. Some types of algae and lichen may show discolouration for several days following treatment. After at least 36 hours, any remaining debris may be removed with a brush or pressure washer if desired, however this is not essential and gentle surface cleaning will continue for weeks and months. Composite Decking Algae Remover & Inhibitor is also effective against black mould, however residual black/grey staining may remain after treatment.

Keep out of reach of children. Dispose of contents/container in accordance with local regulation.
